

Approval of Data Request

Overview of Data Request Approval Workflow

Once a data request is submitted, it will undergo the following approval process and stages:

INFO

Each approval stage will require the necessary role permissions. Please refer to the [user role permission matrix](#) for more details.

Data Request Approval Stages

1a. Verify Data Request

! INFO

User Role Required: **Tenant Admin**

When a data request is made, the data request will be in "Pending Verification". At this stage, the Tenant Admin of the dataset(s) in the data request has to verify the data request.

You are in the Development Environment - Do not enter sensitive information here. DATAHIVE DEV

▼ ☐	test-dataset-no-day-key	GOVTECH	Date column: Published Date 16 Apr 2026 → 16 Apr 2026	● Verify ▼

[Mark selected datasets as](#) ▼ [Update status](#)

During "Pending Verification" state, the Tenant Admin can ask the data requestor (via email or other channels) to [edit their data request](#). Once the data request is properly furnished, the TA can proceed to verify the dataset(s) in the data request.

1b. Add Concierge Service (Optional)

! INFO

User Role Required: **Tenant Admin**

In some data request, the data requestor may have a bespoke requirement (e.g. aggregation of dataset) that cannot be expressed using the data request form's scope filters

In these cases, the Tenant Admin may choose to add a concierge service for those dataset(s) under their purview.

To add a concierge service, click on the "+ Add concierge service" button.

In a concierge service form, the Tenant Admin can assign 1 or more datasets to the concierge. When multiple datasets are assigned to 1 concierge service, it means a join between them is required. Click "Save" when you are done furnishing the concierge service form.

← Add Concierge Service

Concierge service

Concierge service is required when scoping is insufficient in meeting the requirements of the requestor. For example, when aggregates are required.

Dataset(s)

Only select multiple datasets when they are expected to be joined.

Select the datasets used in this concierge

Name of concierge

Input a name

Concierge requirements

Input concierge requirement

Input file (Optional)

Select input file to be used by the concierge

Upload input file

+ Add concierge service

Cancel

Save

To submit the verification and the added concierge services, click on the "Update status" button at the bottom right of the page. The fulfillment of this concierge service will start during the "Pending Data Provisioning" state, after approval by Tenant Admins/Source Agencies (SSOT) with approval rights (see [Step 3](#)).

2. Approve or Reject Data Request

! INFO

User Role Required: **Internal Approver**

After all the Tenant Admins has given their response (reject / approval), the Internal Approver (i.e. CDO/CIO/Director of the data requestor) will have to endorse the data request.

The Internal Approver can either approve/reject the data request:

3. Approve or Reject Fast-Tracked and Non Fast-Tracked Fields

! INFO

User Role Required:

- **Tenant Manager** for approval of fast-tracked fields
- **Source Agency (SSOT) with approval rights** for approval of non fast-tracked fields

After the Internal Approver has approved the data request, the Tenant Manager or Source Agency (SSOT) rep will have to review and approve/reject the datafields accordingly.

- Tenant Managers will be required to approve datafields that are fast-tracked.
- A Source Agency (SSOT) with approval rights will be required to approve non-fast-tracked datafields for their own dataset(s) only. Only one approver per Source Agency is needed.

The Approval tab will display all the data request requiring attention:

 SUCCESS

Data requests will have been successfully reviewed and approved up till this stage!

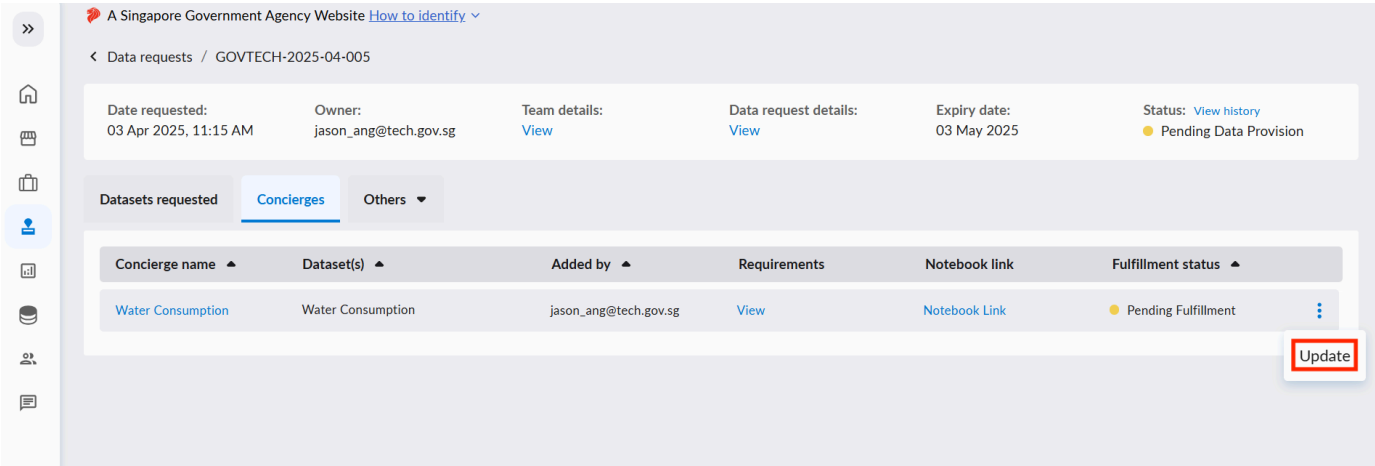

4. Pending Data Provision

 INFO

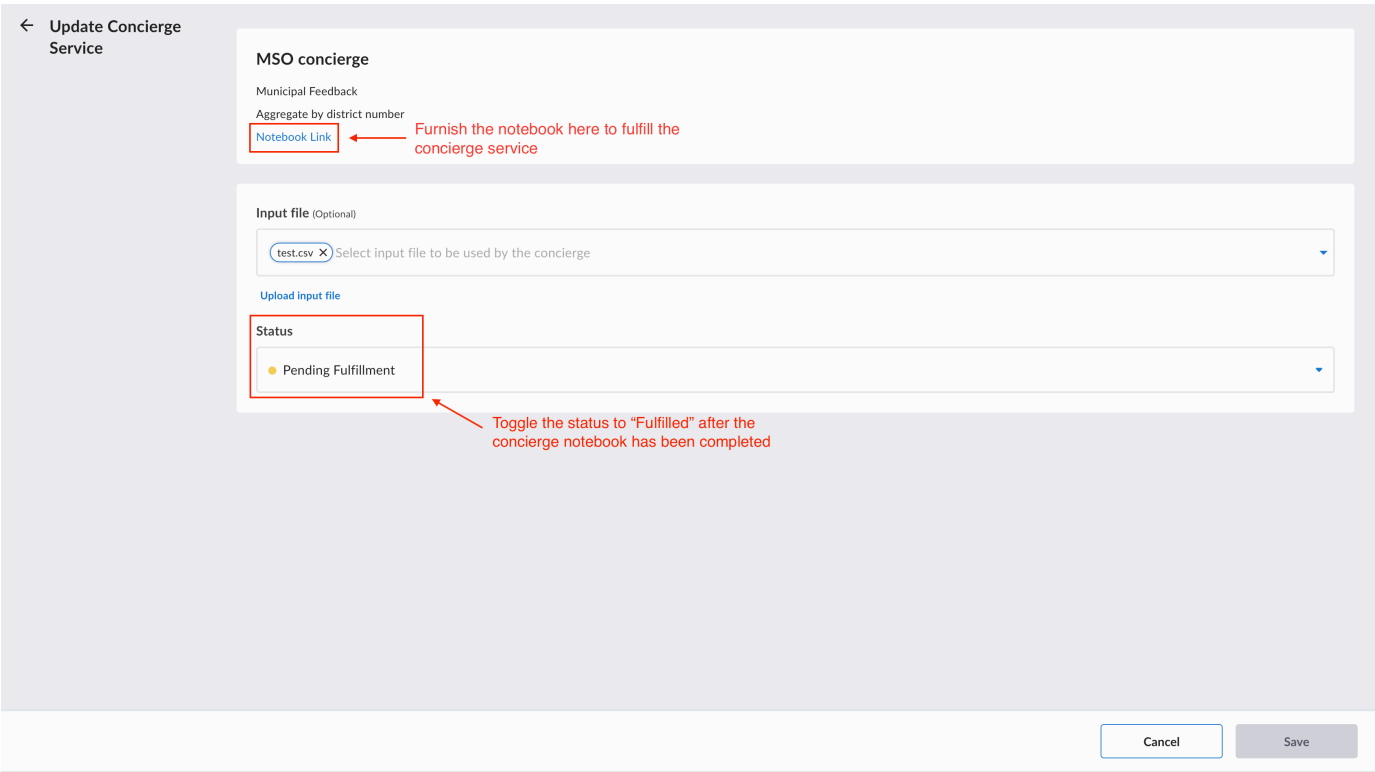

User Role Required: **Tenant Admin**

This state applies when there are **concierge services** added into the data request. In this state, the Tenant Admins of the concierges has to fulfill the concierge services.

Click on the "Update" option and you will be redirected to the page to fulfill the concierge service.

Click on the notebook link to start implementing the concierge requirements in the notebook.

There will be instructions on the notebook to guide the Tenant Admins on how to implement the concierge requirements.

Sort: Name

Basic firm information for registe...

```
from datahive.concierge import ConciergeHelper
```

```
request_id = "GOVTECH-2024-07-026"
concierge_id = "4cb80acd-3d2c-4aeb-90bf-6f62c7653570"
```

```
# The ConciergeHelper class handles authentication and abstracts the configurations
# needed to build the view that will be utilized by end users.
# Should more functionality be needed, please reach out to the DataHive team.
concierge = ConciergeHelper(request_id=request_id, concierge_id=concierge_id)

# METHODS:
# (1) concierge.get_dataframe(<VIEW_NAME>) [View names are available at concierge.view_names and will be display on class initialization]
# (2) concierge.list_files() [Lists all files that have been updated via the DataHive portal]
# (3) concierge.read_input_file(<FILE_PATH>) [Read a file listed in (2) and converts it to a dataframe]
# (4) concierge.save_mapping_table(
#     df=<dataframe to be saved>,
#     table_name=<name of table to be saved>,
#     overwrite=False by default, set to True to overwrite
# ) [Saves a mapping table needed to transform/filter the data for the end user to DataHive's datawarehouse]
# (5) concierge.preview_view(<SQL_QUERY>) [previews the output of the SQL query to be saved]
# (6) concierge.save_view(<SQL_QUERY>) [saves the SQL query as a view that would be utilized by the end user]
```

Once the requirements has been implement, head back to the concierge service form and update the concierge status to "Fulfilled".

💡 SUCCESS

After all the concierge services have been fulfilled, the data request will be fulfilled.

5. Revoke Data Request

❗ INFO

User Role Required: **Tenant Manager**

Tenant Managers can revoke a non-expired/withdrawn data request. Revoking a data request will block data requestor's access to their data and data request.
