

Connection Setup

Intranet Connection Setup

1. Firewall Rule Change Request

Create Firewall Rule Change Request to open agency's client subnet to DataHive IPs. You can find some samples of such service request in [here](#).

The DataHive IPs are as follows:

Production

Staging

User	Resource	IP	Protocol & Port(s)
Consumer & Provider	DataHive REST API Endpoint	10.192.185.68	tcp/443
Consumer with Synchronous API (Enhanced)	DataHive Gateway	10.192.185.132	tcp/443
Consumer	DataHive Snowflake Data Warehouse	10.192.185.164	tcp/443
Consumer	DataHive Snowflake Internal Storage	10.192.185.167	tcp/443

▶ [Setup verification](#)

2. Create DNS Entries

Create DNS entries to allow your system(s) to resolve the IPs of DataHive's domains, you would need to add the following DNS entries to your appropriate DNS.

i NOTE

If your system is connected to the WOG DNS then there is no need to add entries that are already in the WOG DNS.

Production **Staging**

User	Domain	IP	In WOG DNS
Consumer & Provider	datahive.gov.sg	10.192.185.68	Yes
Consumer & Provider	api.datahive.gov.sg	10.192.185.68	Yes
Consumer with Synchronous API (Enhanced)	gateway.datahive.gov.sg	10.192.185.132	Yes
Consumer	govtech-datahive.privatelink.snowflakecomputing.com	10.192.185.164	No
Consumer	9cxpjxsfc1stg.blob.core.windows.net	10.192.185.167	No
Consumer	9cxpjxsfc1stg.privatelink.blob.core.windows.net	10.192.185.167	No

▶ Setup verification

3. Testing your entire setup

Your system should be able to connect to DataHive now.

For authentication, please refer to the documentation [here](#). You may also attempt to implement and adapt from the sample scripts [here](#).

For common errors, see [FAQ](#)

Internet Connection Setup

 WARNING

Only direct connection to Snowflake supports internet access.

In your system, please whitelist the following domains.

 INFO

There is no fixed IP for Snowflake public endpoint. Please whitelist by domain instead.

Production Staging

User	Domain
Consumer	govtech-datahive.snowflakecomputing.com
Consumer	9cxpjxsfc1stg.blob.core.windows.net
