

Overview

The Data Status Dashboard (DSD) tracks data issues of datasets on the Datahive platform.

Delivering high-quality data is a key priority for Datahive.

The DSD helps us provide visibility regarding data issues.

Purpose

DataHive Users

SSOT

Tenant Admin

DataHive Users are current and prospective subscribers of DataHive datasets.

The DSD will allow DataHive Users to **keep track of issues affecting the datasets** they subscribe to, or datasets they are intending to subscribe to.

Understanding these dataset issues is crucial for downstream usage of the data for purposes such as reporting, analysis etc.

Data Quality Metrics

The DSD is part of a broader effort by DataHive to monitor metrics that measure data quality over time.

Consequently, this will allow DataHive to work with SSOTs to identify areas for improvement regarding the detection and resolution of data issues.
