

Overview

Users can request for access to a Databricks environment for processing datasets requested on DataHive. Databricks is an Apache Spark environment for processing large datasets, useful for complex data processing or analysis that can't be done on a local machine (GSIB/SOE).

We highly recommend using Databricks if the expected output of the data exceeds **1 million** rows or it is greater than **5GB** in size.

Pre-requisite

1. Opt-in for this feature in your data request form.

Databricks 

 Access to use Databricks for data analysis

2. The data request with Databricks opted-in has to be in a fulfilled state.
3. A [TechPass](#) account. This account is used to log into Databricks. Sign up from [here](#).
 - In the TechPass sign up page fill in your details as follows:
 - **Email Address:** Key in your .gov.sg email address
 - **Mobile number:** Your Singapore (+65) phone number
 - **Is onboarding to SEED required?:** No

Getting access to Databricks

After the data request has been fulfilled, you can access the datasets directly on Databricks.

Click on **Go to Databricks** to access the workspace provisioned:
