

Overview

As a **Data Provider**, you can onboard and publish your datasets onto DataHive. Upon successful upload, WOG users will be able to discover and subscribe to your published dataset.

TIP

 Learn more about how DataHive tokenizes identifiable data [here](#).

These are the key steps to get started. Do take note of the specific user roles required to proceed:

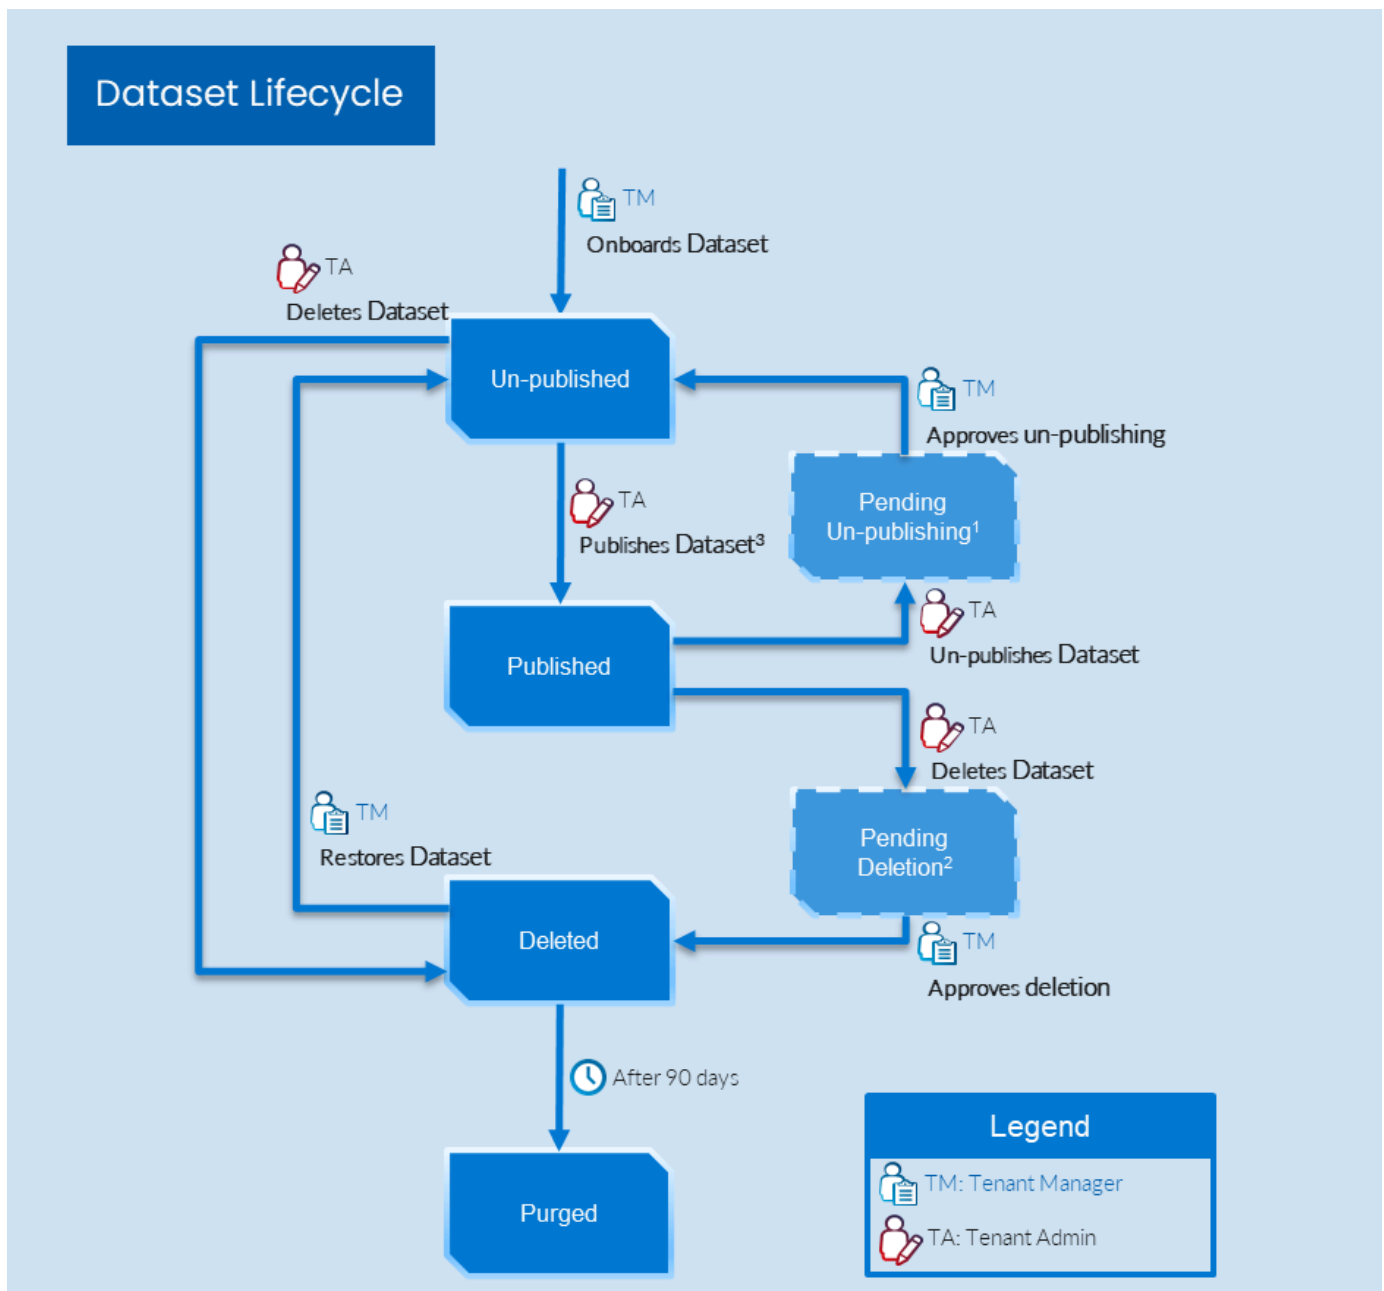

INFO

Please reach out to your **CDO Team** to create a Tenant account and assign you the relevant user role first before proceeding to the next step.

Dataset Lifecycle

The diagram below provides an overview of all possible dataset states and the actions that can transition one state to another.

Please refer to the relevant pages under Dataset Management for the precautions/impacts of each action.

^{1, 2}: Tenant Manager approvals are required for un-publishing / deleting datasets with active data requests. However, Tenant Manager approvals will not be needed when there is no active data

request to the dataset, and the "Pending Deletion" or "Pending Un-publishing" states will be skipped.

³: If a previously deleted / un-published dataset is re-published, the dataset will be published as a new dataset.
