

Main and Sub Status

The Data Status Dashboard (DSD) comprises of **Main Status(es)** and accompanying **Sub Status(es)**.

The following is an example of 1 **Main Status** with 5 **Sub Status(es)** which represent updates on the original issue.

Status ID / Dataset	Agency	Latest status	Status category	Status summary	Affected data	Issue raised date
D7-0015 Bus Locations	LTA	Resolution Confirmed	Incorrect Data Format	Invalid datetime format	Date: 25 Jul 2024 - 26 Jul 2024 Daily Affected Proportion: 100%	26 Jul 2024 No. of days taken for resolution: 0
Sub Status	Date & Time		Additional Details			
Detected	26 Jul 2024, 11:42 AM		Issue spotted by validation process			
Raised To SSOT	26 Jul 2024, 11:58 AM		Issue raised to SSOT			
Verified By SSOT	26 Jul 2024, 03:12 PM		Issue acknowledged by SSOT			
Resolved By SSOT	26 Jul 2024, 05:10 PM		Issue resolved by SSOT, the new file includes proper datetime format			
Resolution Confirmed	26 Jul 2024, 06:47 PM		Everything is working as it should.			

Main Status

For every data issue raised for a dataset, there will be a single corresponding **Main Status**.

The **Main Status** provides an overview of the issue with the following details:

Field	Description
Status ID / Dataset	Status ID (e.g. D7-0015) is a unique identifier for each Main Status . Dataset is the name of the Dataset that the issue arose from.
Agency	The agency (SSOT) in charge of the dataset.
Latest Status	This is a dynamic field that will display the latest Sub Status .

Field	Description
	The Sub Status represents updates to the issue being tracked. For more information regarding the Sub Status and its types, refer to the explanation below .
Status Category	Refer below for the existing list of Status Categories.
Status Summary	A high-level summary of the data issue.
Affected Data	Date represents the range of dates for which the dataset is affected . Daily Affected Proportion reflects the proportion of data (on average) for each day in Date that the dataset is affected by the issue.
Issue Raised Date	The date that the issue was raised to the SSOT for verification. There will be an accompanying subtext to indicate either: - (i) the number of days taken for resolution (if the issue has been resolved) OR - (ii) the number of days since the issue was raised (if the issue has not been resolved)

The existing list of **Status Categories** are:

- **Missing Data**
- **Incorrect Data Format**
- **BSS Threshold Violation**

Sub Status

For each **Main Status**, there can be one or more **Sub Status(es)**.

A **Sub Status** provides updates on the original data issue. Each represents a distinct stage throughout the process of detecting and resolving data issues.

Each `Sub Status` contains three fields:

Field	Description
Sub Status	One of several fixed values to indicate the stage being updated in this <code>Sub Status</code> . For more details on the values available, please refer below.
Date & Time	The timestamp of the <code>Sub Status</code> update.
Additional Details	More information regarding the <code>Sub Status</code> update.

Sub Status Types

The `Sub Status` will belong to one of the following fixed types, with accompanying descriptions on what it entails:

Sub Status Type	Description
Detected	When the Tenant Admin detects that there is an issue with the data.
Raised to SSOT	When the Tenant Admin formally raises the data issue to the SSOT.
Verified by SSOT	When SSOT formally verifies the existence of the data issue.
Resolved by SSOT	When SSOT fixes the data issue (For example, by sending updated data).
Resolution Confirmed	When the Tenant Admin formally confirms the SSOT's resolution of the data issue.
Resolution Rejected	If and When the Tenant Admin formally rejects the SSOT's resolution of the data issue. This can occur if the resolution does not sufficiently address the underlying data issue.

Sub Status Type	Description
Reopened	When the Tenant Admin reopens the underlying data issue after it was previously resolved.
Cannot be Resolved	When the Tenant Admin confirms that the data issue cannot be reasonably resolved.
Tenant Internal Update	Only viewable for Tenant Admins and Tenant Managers. Details for internal-only updates.
BSS Exemption	Alternative path to resolution if the data issue is exempted from BSS standards.

! INFO

In most situations, the **Sub Status** pathway to resolving a data issue will look like this:
