

Sample Scripts

In this section, we will provide you with some sample scripts to help you with implementing connections to DataHive services using your service principal account.

For a comprehensive list of drivers and libraries for connecting to the Snowflake Data Warehouse, please refer to this [list](#).

If you prefer not to use any drivers or libraries to connect to our Snowflake Data Warehouse, you may also use the [Snowflake SQL REST API](#).

NOTE

Please finish the [user setup process](#) before proceeding with the guide.

Python
